SUMMARY

CS undergraduate at VIT-AP working as an SDE Intern at Bluestock Fintech, building production backend systems and data infrastructure for a financial intelligence platform serving Indian equity markets. Brings a strong backend and full-stack foundation — agentic RAG pipelines, real-time collaborative editors (Operational Transformation), and ML diagnostics at 87%+ accuracy. Proficient in Python, SQL, Node.js, React, and Docker.

EXPERIENCE

Bluestock Fintech

May 2026 – July 2026

Software Development Engineer (SDE) Intern

Remote

- Engineered production-grade ETL pipelines and a Financial Ratio Engine for a Nifty 100 Financial Intelligence Platform (92 companies, 12,109+ rows, 0 FK violations), computing 30+ KPIs across 1,073 company-year records via an automated 8-pattern capital-allocation classification system.
- Built a modular Python ETL pipeline with a SQLite persistence layer for a Mutual Fund Analytics system (40 schemes, 10 AMCs), and engineered an automated test suite of 157 data-quality and regression checks achieving a 100% pass rate across both platforms.

TECHNICAL SKILLS

Languages: C++, Python, Java, JavaScript, TypeScript, SQL

Frontend: React.js, TypeScript +, React, HTML, CSS

Backend: Node.js, Express.js, Flask, FastAPI, REST APIs, WebSockets, Microservices Architecture

AI / ML: RAG, LangChain, Agentic AI Pipelines, Vector Search, Pinecone, Embedding Models, Generative AI (Gemini API), XGBoost

Databases & Storage: MongoDB, Redis, SQL (PostgreSQL)

Systems & Architecture: System Design, CI/CD, Real-Time Collaborative Systems, Redis Pub/Sub, JWT Authentication, Horizontal Scaling

Developer Tools: Git, GitHub, Docker, VS Code, AWS (Cloud Foundations)

PROJECTS

DeepContext Engine | Python, LangChain, FastAPI, Pinecone, Gemini, React, Docker | [Link](#)

- Architected an agentic RAG pipeline in Python using LangChain, FastAPI, and Gemini embeddings indexed in Pinecone (285+ dense vectors, 3072-dim, cosine similarity), with cross-encoder reranking and per-document metadata filtering for scoped retrieval across a multi-format corpus (PDF, PPTX, XLSX).
- Built a multi-page React 18 frontend (React Router, Zustand) delivering streaming, citation-grounded chat responses backed by Redis response caching, replacing an earlier single-page interface with a production-grade multi-view UX.

CollabDocs | React.js, Node.js, WebSockets, Redis | [Link](#)

- Architected a real-time collaborative document editor with a custom Operational Transformation engine from scratch, achieving 100% conflict-free consistency across concurrent multi-user sessions via event sequencing and client-server reconciliation.
- Designed a horizontally scalable sync layer using Socket.io and Redis Pub/Sub for cross-node event broadcasting, cutting update propagation to <50ms with zero message duplication across distributed server instances.
- Built a full-stack MERN platform with JWT authentication, RESTful APIs, and MongoDB persistence, powering an 8+ page React frontend spanning document dashboard, editor, and shared/archive/trash views.

Store-Intelligence | Python, FastAPI, YOLOv8, Node.js, Redis, Socket.io | [Link](#)

- Built a 3-microservice CCTV analytics platform for Purple's SDE challenge using YOLOv8 + ByteTrack for person tracking, a custom dwell-time tracker for loitering detection, and Gemini Vision for real-time activity classification.
- Decoupled CV and API layers via Redis Pub/Sub; built MongoDB aggregation pipelines for real-time foot-traffic analytics, delivered through Socket.io alerts, PDF reports, and a React dashboard.

MedDiagno | Flask, MongoDB, XGBoost, Gradient Boosting, Docker | [Link](#)

- Designed a three-disease diagnostic platform (XGBoost, Gradient Boosting) with 87%+ accuracy and <2s inference, using a modular Flask Blueprint architecture for auth, dashboard, and prediction routes.
- Implemented secure session-based authentication (Flask-Login + bcrypt) and a MongoDB Atlas-backed prediction history system; built an analytics dashboard with Chart.js visualizations, containerized with Docker and deployed on Render.

EDUCATION

Vellore Institute of Technology, Andhra Pradesh

B.Tech in Computer Science & Engineering CGPA: 8.6/10

Amaravati, India

2023 – 2027

ACHIEVEMENTS & CERTIFICATIONS

Deloitte Australia Data Analytics Job Simulation | [Certificate](#)

May 2026

Completed data analysis & forensic technology simulation; built a Tableau dashboard and applied Excel to classify data and draw business conclusions.

AWS Academy Graduate – Cloud Foundations | Credly Badge

Sep 2025

Completed AWS cloud foundations covering core services, architecture, security, and cloud economics.
