WORK EXPERIENCE

Bluestock Fintech

Remote

Software Development Engineer (SDE) Intern

MAY 2026 - JUL 2026

- Owned the data layer for a Nifty 100 equity analytics platform — built idempotent ETL pipelines ingesting financial statements for 92 companies with automated data-quality checks, then exposed a 50+ KPI financial ratio engine across 1,073 company-year records via a 16-endpoint FastAPI service.
- Shipped an 8-screen Streamlit dashboard and automated reporting pipeline generating 91 company tearsheets and 10 sector reports per cycle, replacing a manual, analyst-authored process with NLP-generated summaries.

PROJECTS

CollabDocs - [GitHub](#) | [Demo](#)

Tech Stack: React, Node.js, Socket.io, Redis, MongoDB

DEC 2025

- Wrote an Operational Transformation engine from scratch to resolve concurrent edits, using server-side event sequencing and client-server reconciliation.
- Scaled the sync layer horizontally with Socket.io and Redis Pub/Sub, holding update propagation under 50ms with no duplicated messages across server instances.

DeepContext Engine - [GitHub](#) | [Demo](#)

Tech Stack: Python, FastAPI, LangChain, Pinecone, Gemini, React, Docker

MAR 2026

- Architected a multi-tenant RAG platform with two-stage retrieval — ANN search over Gemini embeddings refined by cross-encoder reranking — supporting 7 document formats with page- and slide-level citations.
- Developed a robust multi-tier LLM fallback system, preventing 100% of request failures during outages by automatically switching to alternative AI models.

RTO Shield - [GitHub](#) | [Demo](#)

Tech Stack: Python, LightGBM, scikit-learn, Next.js, TypeScript, Tailwind CSS

AUG 2026

- Developed a COD return-risk scoring pipeline — time-based splits, out-of-fold target encoding, isotonic-calibrated LightGBM — validated against logistic regression and a rules baseline on 120K+ orders.
- Modeled asymmetric misclassification costs into a three-action pricing policy saving Rs. 53K per 10K orders over baseline, served via FastAPI with background-thread model loading for zero-downtime cold starts.

Metadata Driven App - [GitHub](#) | [Demo](#)

Tech Stack: Next.js, React, TypeScript, Prisma, Neon Postgres, SWR, Zustand

JUN 2026

- Engineered a metadata-driven runtime that generates a full working application — UI, REST APIs, and persistence — dynamically from JSON config, rendering an entire entity CRUD app with zero per-entity code.
- Designed a single-table JSONB store and a lazy-loading ComponentRegistry to resolve arbitrary schemas at runtime, avoiding circular imports and deploying serverless on Vercel over a pooled Neon Postgres backend.

TECHNICAL SKILLS

Programming Languages: Python, C++, Java, JavaScript, TypeScript, SQL

Frontend: React, Next.js, HTML/CSS, Tailwind

Backend: FastAPI, Node.js, Express, Flask, REST APIs, WebSockets, microservices

AI / ML: RAG pipelines, LangChain, Pinecone, vector search, embeddings, cross-encoder reranking, Gemini API, LightGBM, scikit-learn

Data & Infrastructure: PostgreSQL, MongoDB, Redis, Prisma, Docker, Git, CI/CD, AWS (EC2, S3)

Core Subjects: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, System Design

EDUCATION

Vellore Institute of Technology

Andhra Pradesh

Bachelor of Technology - Computer Science

SEP 2023 - PRESENT | Available JAN – JUN 2027

ACHIEVEMENTS AND CERTIFICATIONS

- Finalist, Bhopal Health Hackathon (with Johns Hopkins University) [Link](#)
- Solved **200+ DSA Questions** on platforms like [LeetCode](#), [GfG](#), and [Codeforces](#).
- Completed **Deloitte Data Analytics Job Simulation** certification through [Forage](#).
- Completed **AWS Academy Cloud Foundations** training badge, issued by [Amazon Web Services](#).
- Certificate of Participation – Bharatiya Antariksh Hackathon 2026, organized by ISRO. [Link](#)
